Tahir Hussain

Node.js / Backend Developer
Bengaluru, Karnataka | +91 70066 21947 | tahir.10113330@gmail.com | linkedin.com/in/ta-hu

PROFESSIONAL SUMMARY

Backend developer with 4+ years building high-traffic Node.js services at Justdial. Strong in REST API design with Express.js, MongoDB modelling, Redis caching, and ClickHouse pre-aggregation, with measurable latency gains on high-QPS modules and OAuth integrations with Google Business Profile and Meta Graph APIs.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), Node.js, Express.js, PHP, Symfony, Python, SQL

Data: MongoDB, MySQL, ClickHouse, Redis, REST API design, query optimization

Integrations & Tooling: Google Business Profile API, Meta Graph API, OAuth 2.0, Git, GitLab, Jira, Grafana, Kibana

PROFESSIONAL EXPERIENCE

Justdial Ltd. — Bengaluru, Karnataka

Software Development Engineer - 2 | June 2026 - Present

- Integrated AI voice bot platforms (SquadStack, Sarvam AI, Justdial Voice Bot) with Node.js services to automate feedback collection on free leads, improving lead qualification and paid conversion.
- Developed the Meta Business integration (Meta Graph API, OAuth token lifecycle) letting businesses connect Facebook and Instagram accounts, publish posts, and reply to comments from JD Business.
- Own the Search MIS analytics platform used by Product and Engineering, building backend APIs and dashboards across Node.js, Core PHP, and Symfony.

Software Development Engineer - 1 | June 2025 - June 2026

- Built and maintained Node.js and MongoDB APIs for the Client Leads module, a high-traffic system used by businesses across India to view, manage, and act on customer leads.
- Introduced ClickHouse pre-aggregated lead summaries and Redis caching for hot reads, raising requests served under 200 ms from 80% to 99% on a business-critical, high-QPS module.
- Built the Google Business Auth integration for profile connect and sync, handling OAuth flows, token refresh, and data-sync edge cases against Google Business API documentation.

Software Engineer | Apr 2022 - June 2025

- Built vendor-side inventory and product listing APIs for JD Omni, a cloud-hosted e-commerce and no-code website builder (4,400+ themes) used by SMBs, covering catalog structuring and stock updates.
- Built JD Self Ship, an in-house delivery management system letting vendors assign orders to their own staff or auto-route to logistics partners (Dunzo, Shadowfax, Shipyaari).
- Designed order-routing logic with fallback assignment across multiple third-party delivery APIs based on partner availability.

EDUCATION

B.Tech, Computer Science & Engineering — BGSB University, Rajouri, Jammu & Kashmir | 2017 - 2021
